

Product name	RIKACID OSA	
Chemical name	Octenyl succinic anhydride	
Molecular formula (M.W.)	C ₁₂ H ₁₈ O ₃ (210)	Structural formula of OSA
ENCS No.	2-852	
CAS RN [®]	26680-54-6	
EINECS No.	Listed	
TSCA	Listed	

Applications	Epoxy resin curing agent etc.
Feature/Function	<p>A liquid acid anhydride containing a long-chain alkyl group. It is used as a raw material for electrical insulation materials and polyester resins. Improves flexibility, heat cycle performance, thermal shock resistance, shock resistance, and adhesion. As it is a liquid, it is easy to handle.</p> <p>In addition to epoxy resin curing agents, it is used as a sizing agent, lubricant additive, viscosity index improver, pour point depressant, rust preventive, surfactant, dispersant, and anti-settling agent.</p>
